

**RIZON**

Helios PG-37

Full Height Pedestrian Gate

Common Applications

- Perimeter control/fence line security
- Employee and visitor access control
- Single-direction traffic control/one-way exiting

Engineered with security in mind, the Rizon Helios PG-37 Pedestrian Gate is the ideal solution for controlled pedestrian entry. Featuring a 37-inch opening, the PG-37 accommodates comfortable foot traffic while maintaining strict access control.

What sets the PG-37 apart is its integrated side rails, designed specifically to deter unauthorized access attempts. These rails prevent individuals from reaching around to engage the crash-bar from the un-secure side, offering an added layer of security and peace of mind—particularly critical in sensitive or restricted areas.

Built for durability and performance, the PG-37 comes in a steel galvanized and powder-coated finish, delivering long-lasting resistance to weather and corrosion. Whether installed in an industrial facility, transit station, or commercial complex, the Rizon Helios PG-37 delivers reliable protection without compromising on functionality or design.

Helios PG-37 TECHNICAL SPECIFICATIONS
