

Pegasus 600 GB HD

Containerized Unit With Full Height Turnstiles

Common Applications

- Perimeter control/fence line security
- Time and attendance integration
- Loss prevention
- Employee and visitor access control
- Unmanned point of entry
- Single-direction traffic control/one-way exiting

Engineered for operations that demand both high-volume throughput and centralized security oversight, the Rizon Pegasus 600 GB HD delivers unmatched access control capability in a mobile, all-steel package. Built from a converted 40-foot shipping container, this unit is purpose-built for maximum personnel flow and visibility, ideal for industrial sites, large-scale events, secure facilities, and critical infrastructure projects.

Each end of the container is outfitted with three single full-height turnstiles, allowing for simultaneous controlled access in and out of the site—up to six controlled lanes total. At the core of the Pegasus 600 GB HD is a centrally positioned guard shack, giving your security personnel visual coverage of all entry and exit points through built-in glass windows on both interior sides of the container.

The interior guard area is fully enclosed, climate-controlled with integrated AC and heat, and designed to house monitoring equipment, communications gear, or staff workspace—keeping your team protected and fully functional in any season.
